

## Zero Trust Remote Access and Sharing of Hybrid IT Brings Zero Trust Data Access (ZTDA) to the Entire Organizational Infrastructure

### What is FileFlex Enterprise?

- FileFlex Enterprise is a Zero Trust Data Access (ZTDA) platform that provides remote access and sharing of on-premises, cloud-hosted and SharePoint storage and puts it under IT control.

### Why Does Your Customer Need FileFlex Enterprise?

- Addresses organizational security vulnerabilities opened by perimeter-based defenses and VPNs for remote access
- Meets the need of the remote workforce to securely access and share their modern hybrid IT infrastructure while protecting their data. No VPN required.
- Addresses the access and sharing of large files such as AutoCAD and Adobe.

### What Makes FileFlex Enterprise Different?

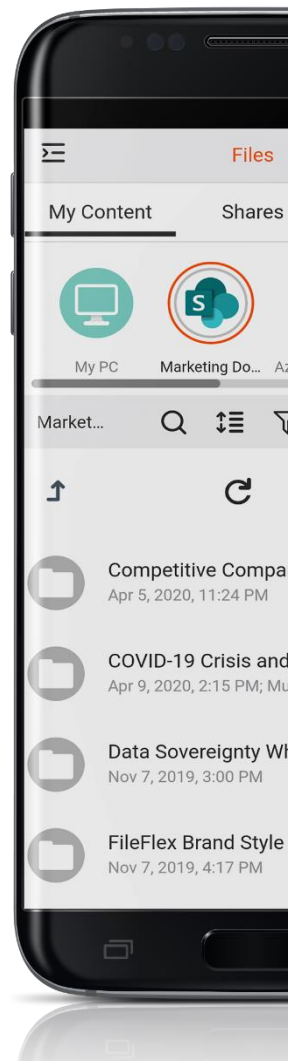

- Zero Trust Data Access (ZTDA) platform to protect access, security and transmission of data
- Single-pane-of-glass access to Hybrid IT – Remotely access on-premises, cloud-hosted and SharePoint storage
- Strong IT control over file access and sharing with activity logging and integration into 3<sup>rd</sup> party incident management applications and IT control over sharing of PHI, PII and sensitive data.

### Other Features

- Create Virtual Data Rooms
- View-only sharing
- Remote Multi-Location File Management
- Very Easy to Install, Configure and Maintain
- No File Sharing Size Limits
- Low Cost Model.

*"FileFlex is definitely faster than a straight VPN connection. People love it at onsite meetings. Simply using their phones, they can show detailed drawings quickly and easily from their source locations."*
