GOVERNMENT ELECTRICAL UTILITY
Secure Remote Access of Self-Hosted SharePoint

Who:

- Government-run electrical utility

Need:

- Secure remote file access for approximately 500 engineers of compliance documents (NERC CIP) stored on a self-hosted on-premises implementation of SharePoint.

- Create a group of users that are not permitted to share documents. They can only be permitted to view, download and upload documents.

Fileflex Enterprise Solution Provided:

- Provides the utility zero trust remote access to an on-premises implementation of SharePoint over the Internet. No VPN is required.

- Allows the utility to create a group that can only view documents. No sharing permitted.

- Allows the utility to create a second group that can share documents stored on self-hosted implementations of SharePoint with external parties.

- Provides single-pane-of-glass file management between their self-hosted implementation of SharePoint and the utility's multi-domain hybrid-IT infrastructure of on-premise, IaaS, and other company storage.

- Provides the utility an activity log over all remote access and sharing activities.

- Provides utility an IT management toolkit to control remote file access and sharing for their organization.

- Supports their need for NERC CIP regulatory compliance.
